

## Client Success Story:

## Infrastructure & Networking

### **Client:**

\$700 MM Publicly traded manufacturer and distributor of consumer products. Company has operations across the United States, Latin America, and China.

### **Situation:**

Company needed to upgrade its Worldwide Enterprise Data Center and network operating systems, and implement a Disaster Recovery Facility in order to improve reliability, security, regulatory compliance, performance, and manageability. Company also needed to implement industry standard IT operating management practices and control IT operating costs.

### **Services:**

Data center and network (Local/WAN) design and implementation, data center relocation, IT managed services (data center, network operations, telecommunications, help desk).

### **Auxis Role:**

- Designed Enterprise Data Center using latest networking technologies.
- Configured & implemented data center to support worldwide operations.
- Massively improved company's ability to recover from natural or infrastructure disasters by relocating data center to remote & secure co-location facility.
- Implemented industry standard IT service management processes.
- Led and managed IT operations and end-user support including telecommunications for North America (10 locations).
